

PARAMBHAAV TECH — BRAND GUIDELINES

Version 1.0 • 05 November 2026

01 Brand foundation

Positioning: A digital transformation partner for medium-sized enterprises, including traditional and non-technology-led businesses.

Core promise: Make technology practical, useful and accessible so businesses can operate better, serve customers better and grow with confidence.

Recommended tagline: Digital Transformation for Growing Businesses.

Personality: Confident, clear, dependable, modern, pragmatic and human.

02 Logo system

Parambhaav

TECH

Use the dark-background logo on black or charcoal. Use the light-background logo on white or very light neutral surfaces. Use the standalone symbol for compact avatars and favicons.

Clear space: Keep at least the height of the lower symbol stroke free on every side. **Minimum size:** 160 px wide on screen or 35 mm in print for the full lockup.

Never: stretch, skew, rotate, outline, add shadows, change proportions, or recolour the master logo.

03 Colour palette

Primary black #090A0C • **Charcoal** #17191D • **Silver** #D9DDE2 • **Silver shadow** #AEB4BC • **White** #FFFFFF • **Muted grey** #727983.

Keep the master identity predominantly monochrome. Silver is an accent; do not use it for long body copy.

04 Typography

Display: Montserrat SemiBold or a similar geometric sans-serif. **Body:** Inter or Arial. Use bold, concise headlines and comfortable line spacing. Keep the TECH descriptor letter-spaced.

05 Business architecture

Real Estate: digital tools and services for property businesses, brokers, developers and related operations.

EduTech: digital learning, education platforms and technology-enabled education services.

Digital Services: transformation consulting, workflow automation, websites, platforms, integrations and technology services for growing businesses.

Treat these as business units under the Parambhaav Tech master brand, not as separate competing logos.

06 Voice and messaging

Explain technology in plain business language. Lead with business outcomes such as time saved, better visibility and simpler workflows. Be confident and practical; avoid jargon, hype and guaranteed-result claims.

Suggested elevator pitch: “Parambhaav Tech helps growing businesses simplify operations and embrace digital ways of working. From real estate and education technology to tailored digital services, we make technology practical for the people who use it every day.”

07 Visual direction

Use clean layouts, generous whitespace, strong alignment, simple geometric shapes and authentic business photography. Prefer real teams, workplaces, property environments, classrooms and product screenshots. Keep gradients subtle and reserve silver for the logo and key accents.

08 Digital accessibility

For normal website and document text, aim for at least 4.5:1 contrast for regular text and 3:1 for large text. Do not rely on colour alone to communicate meaning. W3C WCAG 2.2 provides the relevant contrast guidance: https://www.w3.org/TR/WCAG/.

09 Next production assets

Prepare final vector master artwork, transparent PNG exports, favicon/social avatar, business card, letterhead, website lockups, proposal template and pitch deck. This v1.0 logo is a clean vector interpretation of the approved low-resolution preview; approve the final master artwork before trademark filing or large-format production.
